By middle of April plants will be 4 or 5 inches tall, when they should be set in the garden in rows 18 inches apart and 4 inches apart in the row. One ounce of seed will sow 100 feet of drill.

Country Gentleman Sweet Corn

Probably the very sweetest variety of any Sweet Corn. The large ears, 8 to 9 inches in length, are tightly set with very deep kernels in very irregular rows, commonly called by some growers "Shoe Peg" Sweet Corn. The deep white kernels are deliciously sweet, tender and milky and as the ear is covered with an unusually heavy husk, the tenderness and sweet flavor is retained much longer after taken from the field than with any other variety. On account of its sugary sweetness it is the leading canning variety, both commercially and for the home. Quality considered, it is the very best late Sweet Corn, ready for use in about 110 days after sowing. Our seed stock of Country Gentleman is very carefully selected and has been highly satisfactory to all our customers.

TALISMAN

The New Everblooming WONDER ROSE

Beauty Bush—Kolkwitzia Amabilis.

Beauty Bush (Kolkwitzia Amabilis). An exceedingly handsome ornamental shrub which came from the wilderness of China and Central Asia. The foliage and habit are attractive when the shrub is out of flower, and it is perfectly hardy as far north as Montreal, Canada. It grows 6 to 9 feet high when mature, is erect and twiggy, producing long, arching branches covered in Spring with clusters of small, tubular flowers of the honeysuckle type, borne in such profusion that the bush is one cloud of delicate pink. It has all the merits of a perfect shrub, hardiness, year-round beauty in foliage and habit, and an amazing profusion of beautiful pink flowers. **Strong, 2-yr.-old, field-grown plants, 12 to 18 in. tall, $1.50 each; 3 for $4.00.**

Butterfly Bush—Buddleia.

Butterfly Bush (Buddleia) This shrub is known sometimes as "Summer Lilac," being one of the most desirable of Summer-flowering shrubs. It is of quick, bushy growth, succeeding everywhere, making a plant 3 to 5 feet tall. It begins to bloom in July and continues until severe frost, producing a wealth of beautiful spiked flowers of a pleasing shade of violet-rose, 10 inches long and 3 inches in diameter are not unusual. It is easily grown and flowers freely the first season after planting. In the North it dies back nearly to the ground during the Winter, forming new and stronger branches in Spring.

Strong, 2-year-old, field-grown plants, 40c each; 3 for $1.10.

Korean Bridal Wreath—Spirea Trichocarpa.

Korean Bridal Wreath (Spirea Trichocarpa). This handsome new shrub was discovered in Korea, and has been greatly admired by all who have seen it since its introduction to America. It grows, when mature, 4 to 6 feet tall, forming a big, dome-shaped bush covered in its season with large, rounded clusters of snowy flowers marked with darker eyes. It thrives in ordinary garden soil and enjoys sunshine and full exposure, and is most attractive even when not in bloom, as it retains its beautiful glossy green foliage late into the Autumn. It is hardy throughout the United States, and is the best of all the Spireas. **Strong, 2-year-old, field-grown plants, 12 to 18 in. tall, $1.15 each; 3 for $3.00.**
